## Conditional Probability

In a group of 100 sports car buyers, 30 bought alarm systems, 20 purchased bucket seats, and 10 purchased an alarm system and bucket seats. If a car buyer chosen at random bought an alarm system, what is the probability they also bought bucket seats?

Answer :
Step 1: Figure out $\mathrm{P}(\mathrm{A})$. It's given in the question as $30 \%$, or 0.3 .
Step 2: Figure out $\mathrm{P}(\mathrm{A} \cap \mathrm{B})$. This is the intersection of A and B : both happening together. It's given in the question 10 out of 100 buyers, or 0.1.

Step 3: Insert your answers into the formula:
$\mathrm{P}(\mathrm{B} \mid \mathrm{A})=\mathrm{P}(\mathrm{A} \cap \mathrm{B}) / \mathrm{P}(\mathrm{A})=0.1 / 0.3=0.33$.

The probability that a buyer bought bucket seats, given that they purchased an alarm system, is $\mathbf{3 3 , 3 3 \%}$.
